Education

Clemson University – Graduate School

Clemson University - Honors College; GPA: 3.86 / 4.00; Magna Cum Laude

Clemson, SC

Graduated in Bachelor of Science in Computer Science, minor in Artificial Intelligence

Scholarships: SC Life Academic & William P Clyburn Memorial

Skills

Languages: Python, C/C++, Java, MATLAB, HTML, CSS, JavaScript

Tools & Frameworks: GitHub, Git, Linux, Microsoft, VSCode, SQL, Prolog, Azure

Relevant Skills: Calculus, Linear Algebra, Data Structures & Algorithms, Agile, Scrum, Statistics, Discrete Structures, PyTorch, OpenCV, Pandas, Data Annotation, & Qiskit

Certifications: AWS CLF-02

Experiences

TD SYNnex – Technical Scholar II

March 2026 - Present

- Developing an audio transcription tool to capture conference session audio for the 2026 TD SYNnex Inspire
- Utilizing Microsoft Fabric, Azure, SnapSight, and PostgreSQL to store and manage transcription data
- Developing a RAG-powered LLM to provide attendees with event information and assistance
- Automating internal workflows using TD SYNnex's in-house software.

Capgemini Capstone Project - Intelligent Warehouse System

Fall 2025

- Developed a server-client architecture with Azure SQL and Blob Storage to upload data via API calls
- Applied computer vision for inventory tracking and using NVIDIA Omniverse to simulate warehouse operations
- Built an application for warehouse workers to improve efficiency and reduce inventory errors

Honors Thesis – FeltusLab Bioinformatics Research

Fall 2025 – Spring 2026

- Developed a gradient-based MLP attribution model to rank 19,738 genes by perturbation impact
- Applied gradient-based attribution to identify high-impact genes from MSigDB and silhouette-derived gene sets
- Analyzed gene sets using Fisher's exact test, enrichment analysis, and protein–protein interactions
- Authored a 30+ page undergraduate honors thesis on model evaluation and results

Clemson University Teaching Assistant

Fall 2024 – Spring 2026

- Taught lab sections of 30 students in Data Structures & Algorithms and Computer Organization
 - Graded assignments, held weekly 2-hour office hours, and enhanced student understanding
 - Covered key concepts: C++, Linked Lists, Sorting, Binary Trees, Memory Allocation, and Binary Operations
-

Projects

1st Place – HackMIT 2025 – SUNO Sponsored Challenge

- Created and labeled data for a YOLOv11 classification model to detect drawn piano notes on paper
- Detected hand-pressed notes via Mediapipe Hands and OpenCV recording to trigger note playback
- Built a Tkinter GUI to play, classify, set octaves, and record notes, using threading for concurrent execution.
- Enabled an affordable, easy-to-use system for learning piano.

3rd Place - MIT IQHack 2025 Quantum Hackathon - Alice & Bob Challenge

- Applied a buffer for Alice & Bob's cat qubits to reduce redundant bit-flip tests and minimize photon decay
- Used the Lindblad master equation with eigenvalues to analyze qubit fidelity under decay processes
- Generated fidelity vs. time graphs for varying decay rates to quantify the effect of photon loss on qubits
- Leveraged Dynamiqs and Qiskit Python libraries while following agile methodologies for workflow

Clemson University CUhackit - Head of Partnerships

- Organized Clemson's annual 24-hour hackathon, having 200+ students to collaborate and build innovative projects
- Secured industry sponsorships to provide funding, mentorship, and technical resources for participants
- Coordinated company engagement with partners including AWS, Capgemini, TD SYNnex, Microsoft, and more
